

SNAPSHOT

Infusion GB Limited

Key facts

SAP Business One increased efficiency in reporting.

Decisions previously reliant on instinct and memory are now informed with accurate business insight.

Improved analysis of production, with a specific focus on downtime.

INFUSION//GB

“We can generate reports much quicker and rely on the information with confidence”

Graham Collins, Operations Manager, Infusion GB Limited.

Infusion GB produce a large range of string, tag and envelope teabags for a range of customers. From small independent brands to larger household name brands. The biggest challenge was finding a solution that could be implemented quickly and one that would ensure they were able to cope with customer growth and the complexity surrounding the number of different SKU's, which could often be in multiple languages.

With the expert help of Signum Solutions, Infusion GB implemented SAP Business One with ProcessForce. This gave them the ability to manage their warehouse more effectively and allowed them to manage the flow of goods more

efficiently as well as giving greater control and visibility of stock on site.

Access to information is now dramatically improved and has enabled them to grow the business, confident in the knowledge they have the right systems in place to achieve this.
