“The new system will encapsulate all of the inner workings of the company. Whilst before we had various different procedures in place, some paper-based and others using the old system, everything will now be covered within SAP Business one.”

**Tom Brumwell - Operations Manager, Polyurethane Progress Ltd.**

Polyurethane Progress Ltd is a family owned company, which has been in the manufacturing industry for almost 30 years. Having seen tremendous growth over recent years , the business has ambitious plans to ensure its place as a market leader within the industrial plastics marketplace. Plans for further expansion and future-proofing the business prompted the decision to invest in a new ERP system, SAP Business One hosted in The Cloud, which will provide increased productivity and profitability, alongside streamlining of operations; replacing both online and offline processes.
