

Time to shine with SAP Business One®

Designers and manufacturers of products for detailing valeting and industrial usage, PIP Chemicals, implemented SAP Business One to take control of their stock and bill of materials. Working with chemicals involves many complex processes, but with Signum by their side PIP Chemicals feel in control.

Before: Challenges and Opportunities

- PIP Chemicals previous software relied heavily on spreadsheets and could not handle stock complexity.
- The manufacturing side of business was being neglected.
- New software was required that would provide accurate stock control and automated bill of materials.

Why SAP Business One and Signum

- SAP Business One provided PIP Chemicals with a fully integrated solution that achieved everything they required.
- Signum offered many customizations to SAP Business One, enabling PIP Chemicals to integrate their website, and operate a health and safety system linked to both SAP and the website.
- Signum are continually in touch, with new suggestions and ways to personalize the software.

After: Value-Driven Results

- Since implementation NRPs, stock control and bill of materials are now maintained seamlessly.
- Manufacturing orders put out to operatives are fully traced, from the receiving of goods to quality control and sign off.
- Archiving add-ons has saved time, with simple scan and locate.
- PIP Chemicals is currently in talks to implement the warehouse manufacturing system to remove paper processes and eliminate errors.

“Fundamentally, **the overall ERP solution is the critical core of our business**. Which makes SAP and Signum some of our most crucial partners.”

Adam Hunniford – Director of PIP Chemicals
